PADDLE MIXER

FEATURES

- A wide range of capacities
- Low investment, production and maintenance costs
- Maximum flexibility and versatility
- 100% safe maintenance caps
- Lock system for discharge doors against power failures
- Robust construction and standard dust cross pipe
- Extensive choice of alternatives for liquid addition
- Spare parts support and customer service

AREAS OF USAGE

- Feed mills
- Flour mills
- Chemical plants

PADDLE MIXER

Yemmak paddle mixers are designed and manufactured for homogeneously mixing different grinded materials (with or without liquid addition) which has a free flow movement during the process. Mixing with or without liquid addition is both possible. It provides a mixture of raw materials that are grinded at 1/100,000 mixing sensitivity.

The time for charging is decreased with wide area pneumatic doors; the time for discharging decreases with double discharge doors that can open from end to end. The time saved with before mentioned process, increases the capacity/hour value.There are 100% secure discharge doors which stay locked until the rolling equipment finishes its rotation.The number oflines and nozzles can be coupled according to the requested liquid type and variety.
